JavaScript,HTML5,C++

C and CSS.

PROJECTS

My Website

https://amoresoftware.000webhostapp.com/

The website is just an example of what I can do on the front end side of development.

Assign Schedule

I written the program called Assign Schedule in C# to allow a Security Firm to assign employees to their post. When it's connected to a database written in SQL, the user can store all post to their officers. The only thing it lacks is a function that allows the user to print out the schedules. I created this project for fun!
